HARDY CUSHION MUMS

There is no hardy flower grown that gives so much for so little. The newer varieties bloom from August on to meet the later kinds that are the glory of fall, flowering well even after heavy frosts. The hardy mums flourish from Maine to Florida and from the Atlantic to the Pacific in any open, well drained, sunny soil.

Hardy Mums are our personal Hobby. We have found several worthwhile new ones to add this year.

Every year we try new ones. If they are better they take the place of some previously grown. We always plant strong, well rooted single shoot plants in our fields and this is what we will ship to you.

BEAUTIFUL CUSHION MUMS

Bushels of Bloom

From June Till Frost

Cushion Mums form dwarf compact bushy plants rarely over 15 inches in height and so covered with flowers that they resemble dwarf azaleas. They are very hardy blooming from August till frost the first year and from June till frost the second. There are many hundreds of flowers on each plant.

We have eliminated the inferior Cushion Mums this year but now offer you

HARDY ROSES

At last we have been able to get enough stock of the type of rose bushes we have been wanting to sell for years. These are 2 year old roses, grown on their own roots—not budded on wild roses. Such plants never go back to the wild type, will live for years and years in your garden and while they do not make the large bush the first year their hardiness will more than make up for this. Own root roses cost more to produce than budded roses but we luckily are able to offer these at very low prices. Be sure to order roses early as the stock in most varieties is limited. We will substitute nearest variety when the one ordered is out unless you forbid.
